

Tradesman DC Models at a Glance

All Tradesman grinders feature the powerful Toycen DC Motor and Control. They all plug in to regular household 120V AC (220V available) outlets

Tradesman 6" Machinist Dual and Single Shaft

The Tradesman Machinist comes in single and dual shaft versions. The Tradesman Machinist can be configured to grind Weldon set screw flats, neck reductions, corner rads, countersinks, uni-bits, reamers and more.

Tradesman 8"

The original Tradesman, the Tradesman 8 is our most popular grinder for the wood turning community. A pair of our CBN Precision Plated grinding wheels: 80 and 180 make this grinder an all-round multi purpose grinder. Use our Tormek bracket to use your favorite jigs - from knives, scissors and planer blades to carbon fiber and plastics. Add a belt sander. Ready for Wolverine by One-Way. Available fitted with battery for field work.

Tradesman Edge - Edge 810, Edge 12 and Edge Belt

Designed for fabricators and knife makers the Tradesman Edge uses a geared belt reduction to drive the 8" or 10" grinding wheels. This provides even greater torque at low speeds and a lower bottom rpm of 200. Three models: Edge 810 for 8", 10" wheels and belt sanding attachments, Edge 12 for Tormek wheels and water bath, and Edge belt for belt sanding.
